★★★★☆ Node.js

★★★★☆ C++

★★★★☆ Python

★★★★☆ HTML5

★★★★☆ CSS

★★★★☆ Sass

★★★★☆ Vue.js

★★★★☆ Git

★★★★☆ JavaScript

★★★★☆ React.js

Experience:

* LANACO Summer internship, August 2021

Projects:

* Gaming State, January 2020

This is just an example of my current knowledge of web developing and I generally exercised my CSS and HTML knowledge here with a bit of animations in the mix.

* BarPage, January 2020

This project has helped me a lot in order to get some deep knowledge about full page animations with javaScript which is really useful and good looking. Having this experience is really nice.

* Travelify, February 2020

Travelify was a simple little project which I actually used to exercise a lot the CSS grid and positioning elements on the webpage in order to make websites more responsive and with easier deployment.

* Show Trackr, May 2020

Show Trackr was my first ever collaboration project with a graphic designer to create something really modern and cool. I really enjoyed creating this website as it helped me a lot with my CSS and Sass skills.

* Random Puns, June 2020

Random Programmers puns are my first full-stack project and it consisted of giving a person ability to add any puns they wanted to the database and it would show for the client while using the app.
